A TRUSTED HISTORY

Experts in transmissions and driveline systems

In 1974 our founder, Rodney Hill, established MIT to design, supply and service transmissions and driveline systems across the UK. Since then we have grown to become a centre of excellence in driveline systems providing customers with full product life cycle support from system design, supply, commissioning, maintenance, repair, spares and overhaul or replacement.

From our bases in southern and northern England, we provide comprehensive UK and Ireland coverage along with established global mobile support services. We have invested in a highly trained and dedicated technical engineering team and a significant inventory in world class brands of new and refurbished transmissions, driveline systems and spare parts.

Our strategy is to support our customers' multiple applications with custom designed driveline systems and ensure whole life care.

MIT achieved ISO9001 in 2002.

Fully compliant to the requirements of the Cyber Essentials scheme.

WORLD CLASS BRANDS

New & refurbished transmissions, driveline systems and spare parts

Over the years, we have carefully evaluated and selected our manufactured brands and have a comprehensive product range of new and refurbished units and spare parts. Furthermore our long supply history has allowed us to build an inventory of discontinued units and spares, which ensures long term customer support. Today we hold over £2M of inventory, with a product range covering:

Transmissions & Gear Boxes

- Marine
- Industrial
- Off-Highway

Hybrid and Electric Driveline Systems & Batteries

Clutches & Power Take Offs (PTOs)

Fluid Couplings

Pump Drives

Torque Converters

Anti-Noise & Vibration Systems

Air Compressors

Boat Management Systems

- Express Joystick Systems
- Electronic Control Systems
- Marine Steering Systems
- Bow & Stern Thrusters
- Trim Tabs
- Shaftlines & Propellers

Arneson Surface Drives

Controllable Pitch Propeller Systems

ZF Services Partner

Marine

CUSTOM SOLUTIONS

Enhanced driveline systems built to your specification

We are experts in the design, supply and installation of custom made solutions for marine and industrial driveline systems, with an in-house design and applications team providing a flexible and bespoke response to our customers requirements. Our design and applications team provide a full consultative service to ensure that your application requirements are fully developed and specified. You are provided with CAD drawings, fitting/operation instructions and a full commercial proposal. This provides a driveline solution customised entirely to meet your individual application requirements.

Our team appreciates that requirements come in all shapes and sizes and our custom manufacturing capabilities extend “beyond the handbooks” and reinforce our customer service and customer driven philosophy.

Whether you require a simple modification to a standard product or complete customised system engineering, we can accommodate your request in a timely and cost effective manner.

Our solutions team can achieve this directly on site or at one of our uk service centres.

360° SERVICE

On land or water, we keep you driving

24/7 Global Support

Minimising your downtime

An essential aspect of our value to customers is our team of highly qualified mobile service engineers, operating from our service centres in Kent and Yorkshire. With over 40 years' experience and acknowledged as one of the leading driveline experts throughout Europe, we have extensive service capability on most models of marine and industrial transmissions including Twin Disc, Transfluid, ZF, Rubber Design, Quincy, Technodrive, Arneson, Rolla, Nico, Servogear, and Fabco.

We customise our service provision to meet your needs and provide you with the necessary engineering support, be it an emergency or regular maintenance, whenever and wherever you require.

All repairs, maintenance and overhauls are carried out using genuine OEM components to ensure quality, which helps you manage the life cycle of your application within a managed budget.

Examples of the Service we offer:

Service Direct

All MIT engineers have a van equipped with tooling and spare parts, which enables them to service drivelines throughout the UK and Ireland. Furthermore, we have a support services team that can operate globally, and are available with air transportable tooling to ensure expert engineering support around the world. Therefore, if your vessel breaks down in the North Sea or your rock crusher has a fault in a quarry on the other side of the world, we have the parts, skills and manpower to ensure that your downtime is minimised.

Preventative Solutions

Utilising our Yorkshire and Kent based service centres along with Service Direct, we offer first class preventative driveline maintenance and repair.

By assisting you to plan your maintenance requirements, we provide you with the security that your applications are in full operable condition, maximising uptime and minimising costly intervention repair.

MARINE

Commercial, military
and pleasure

Over 40 years' experience in the Marine sector has earned us an enviable reputation providing driveline solutions and after market support to all aspects of the marine industry. Our applications include boats for commercial, work boats, fishing, pilot, wind farm maintenance and transfer vessels, tugs, military, search & rescue and pleasure marine.

We can supply and support solutions for standard and hybrid marine transmissions,

control systems, steering, trim tabs to fixed pitch propulsion, CPP, vibration and sound control.

We have the ability to develop a solution to suit your business be it in operations provision, boat design, boat yard and maintenance, boat building, oil and gas, pipeline or rig maintenance.

Working with leading brands such as Twindisc, Transfluid, Arneson, Rubber Design, Rolla, Quincy and ZF to ensure our product portfolio meets each of our customers individual needs.

WHAT GOES WHERE?..

INDUSTRIAL

Mining, quarrying, construction,
OPG & agricultural

From the simplest clutch installation to the more complicated hybrid driveline solution MIT can deliver, drawing on our vast experience of working with carefully chosen component suppliers.

We are able to provide both new and reconditioned units, along with whole life support to equipment working in the most arduous environments such as, airfield maintenance, raw materials and mining, rock crushing, quarrying, building and construction, conveyor systems and civil engineering applications.

Customers working in the oil and gas, fracking, recycling and the energy and water industries have benefited from our experience in the supply, installation, service and repair of industrial transmissions and drivelines. Power shift transmissions, fluid couplings and clutches/power take offs are a few of the solutions provided.

We work with leading brands such as TwinDisc, Transfluid, Rubber Design, Quincy, Technodrive and Fabco to ensure our product portfolio meets each of our customers individual needs.

SPECIALIST VEHICLES

Fire trucks, airports, off highway, locomotives, road trains

Enabled by our trusted supply network MIT can provide a complete range of driveline and transmission solutions for specialist vehicles and locomotives, including hybrid drivelines, torque converters, control systems, and air compressors for air start or braking.

Fire trucks

Due to requirements from Aircraft Rescue and Fire Fighting (ARFF) vehicle manufacturers and operators, we established a dedicated Fire Division, MIT FIRE, which is a UK Ministry of Defence approved "In Service Support Provider" (ISSP) for the maintenance and repair of specialised fire apparatus that are required for aircraft rescue and fire-fighting on airfields. Our knowledge base of equipment and appliances in the ARFF services has increased from its traditional core business of transmissions, drivelines, axles and road train to include pump modules, monitors, tanks, chassis maintenance and any equipment for ARFF as well as specialised marine equipment for waterborne fire fighting. We are fast becoming the first call for any manufacturer or operator who requires a fast, reliable and professional service.

Airports

We provide innovative solutions for airport ground support vehicles, ranging from standard power shift transmissions to complete electric and

hybrid drivelines. Our systems are in operation in airports around the world and cover stairs, belt loaders, trucks and trolleys.

Off Highway

We have considerable experience in transmission supply and maintenance for agricultural tractors. We provide service to wood chipping and multi tree handling equipment.

Within the quarrying and mining industry we have a long history of supporting dump trucks and loading shovels. We also cover municipal vehicles such as road sweepers and hedge-row cutters.

Road Trains and Theme Parks

We also have a global supply into the leisure and theme park market providing hybrid and electric drivelines for road trains along with compressed air solutions for a variety of theme park applications.

Locomotives

We have extensive experience in the supply and service of transmissions, torque converters, control systems and air compressors for air start or braking systems for a variety of rail applications including passenger, freight, tamping, track-laying, cable laying and general service locos working in steelworks, industrial areas, docks and mining.
